CombineNet Contract Management

Not all contract management solutions are created equal; ease of use, flexibility, and strong compliance support are key desired features to ensure successful user adoption. CombineNet Contract Management offers a best-of-breed contract lifecycle management solution that is proven to reduce the time and effort involved in the creation, negotiation, review and approval, and post-execution management of buy- and sell-side contracts.

Tight integration with the CombineNet ASAP[®] e-sourcing product enables contract managers, procurement, and sourcing professionals to quickly initiate new supplier contracts using supplier information and pricing directly from ASAP. Clause libraries and contract templates further speed the process of contract creation, using pre-approved language and Workflows to route contracts through internal stakeholders for review and approval.

Native integration with Microsoft[®] Word[®], and embedded redlining from Workshare[™] DeltaView improve the management of contract documents and the comparison of revisions with full audit history and traceability.

Internal review and approval processes are supported with a robust Workflow that routes contract revisions to the right party based on the type of change to the contract. Upon final approval and execution, CombineNet Contract Management provides an easily managed contract repository that provides ongoing maintenance and compliance capabilities.

(more)

CombineNet Contract Management improves contract compliance by implementing a standard, consistent process for the creation, approval, execution and ongoing maintenance of contracts.

Best of Breed Contract Lifecycle Management from CombineNet:

- Tight integration with CombineNet ASAP speeds the creation of contracts from e-sourcing events.
- Native Microsoft Word Integration allows the importing of clauses as actual fragments and enabling rich tagging, including risk classification at the clause level.
- DeltaView Integration (Workshare) offers the world's best redlining engine, with full audit trails.
- Template / Clause Analysis tracks the common changes made in contracts based on templates – enabling template improvement & cycle time reduction.
- Robust Workflow routes contract revisions for internal review and approval based on pre-configured triggers, such as clause-level edits.

Benefits of CombineNet Contract Management:

- **Faster, More Consistent Contracting** – Integration with CombineNet ASAP and template-based contract clauses increases the speed, control and consistency of creating contracts from e-sourcing events.
- **Improved Contract Compliance** – A choice of pre-configured workflows drive the review and approval process to ensure that the contracting cycle follows company standards.
- **Easier Contract Collaboration and Negotiation** – Native integration with Microsoft Word and Workshare DeltaView provides contract redlining and review cycles with third parties, with full audit trails ultimately improving cycle-time, efficiency and control.
- **Contract Lifecycle Visibility** – Enterprise-wide contract repository maintains contract lifecycle data for performance visibility, renewals, and key contract milestones.

Powered by industry-leading technology from Upside Software, CombineNet Contract Management is a best of breed software solution for improving contract lifecycle management, from initial creation through negotiation, review, approval, and ongoing management of contracts.
