

For Logistics Providers

CombineNet provides Logistics Service Providers with our world-class solution for the sourcing of Truckload, Intermodal, Less-than-Truckload, Ocean Freight, and Airfreight transportation rates and contracts. Delivered through **CombineNet ASAP (Advanced Sourcing Application Platform)**, our logistics partners gain the advantage of using our industry-leading Expressive Bidding[®], Optimized Scenario Analysis, and rapid RFX capabilities. Those features have made CombineNet the [transportation sourcing tool](#) of choice for logistics providers who want to drive more value and cost savings for their customers.

Benefits For Logistics Providers:

- Enhance Customer Value Proposition
 - Reduce Cost of Transportation under Management
 - Increase Global Transportation Efficiency
 - Support Green Supply Chain Efforts
- Increase Customer Satisfaction
 - Ensure Capacity in Tight Market
 - Improve Carrier Service Levels
 - Reduce Network Inefficiencies
- Streamline Operations
 - Reduce Bidding/Negotiation Cycle Time
 - Consolidate and Leverage Volume Across Customers
 - Refocus Resources on Logistics Services

Delivering Advanced Transportation Sourcing for Logistics Providers

Why Turn to CombineNet?

Logistics and transportation consultants, Third-Party Logistics (3PLs) Providers, and Lead Logistics Providers are playing an increasingly important role in the strategy, planning, and execution of their client's global supply chains. Fluctuating transportation costs, capacity challenges, network efficiency, transit times, service quality, supply disruptions, and Green/carbon reduction efforts are all driving the issue of efficient and cost-effective transportation to new heights, and are creating opportunities for logistics providers to expand service offerings, enhance value propositions, and increase ROI for shippers.

CombineNet ASAP provides a configurable, easy-to-use solution that lets logistics providers quickly and easily evaluate the impact of both price and non-price factors in the sourcing and negotiation of transportation services for their customers. Whether sourcing ground transportation for a single customer, or consolidating ocean freight lanes across multiple customers, CombineNet ASAP lets users collect creative carrier offers for better, more efficient service, and leverage our optimized analysis capabilities to find the right balance of cost and value for each individual shipper.

CombineNet ASAP provides the world's leading transportation sourcing solution, refined over the span of a decade across more than \$35 billion in transportation spend.

(more)

CombineNet ASAP lets you balance your customers' transportation costs with enterprise-wide value, by evaluating carriers' best proposals alongside customer business rules and preferences, as well as non-price factors (such as capacity, transit time, incumbency/core carrier status, and other carrier performance factors).

CombineNet ASAP provides industry-leading sourcing capabilities:

- **Expressive Bidding®** – delivers greater value by encouraging carriers to offer creative bids that leverage their strengths. Carriers propose conditional pricing; alternate equipment, mode, route, and service offers; volume discounts; and lane packages to deliver greater value at a lower cost.
- **Scenario BuilderSM** – helps shippers make better decisions faster. CombineNet lets users understand the cost impact of business rules and stakeholder preferences, such as favoring incumbents and core carriers, truckload carriers that participate in the EPA SmartWay Transport Partnership, or ocean carrier with C-TPAT certification. Users can identify awards that balance your clients' needs for cost and value based on real-world capacity, network and carrier efficiency, service quality, carrier relationships, and other non-price decision factors.
- **Industry-Leading Optimization** – provides the most powerful optimization engine available on the market today. Orders of magnitude faster than competing optimization technologies, CombineNet ASAP delivers fast results by analyzing thousands of potential award scenarios that compare unlimited combinations of bids, carrier attributes, business constraints, and preferences in seconds.
- **On-Demand, Software as a Service** – means no software to install or integrate with IT infrastructure. Logistics providers, shippers, and carriers can access the solution from any computer with a Web browser, and data can be shared with execution systems via XML or Microsoft® Excel.
